

The idea is not
to live forever,
but to create
something
that will.

Requirements	3
Syntax highlighting	3
 Chapter 2	 5

Chapter 1

This is the place where you begin **your** writer journey.

Requirements

To start writing, you will need the following:

- Some free time
- An idea about the first sentence
- Github token with minimal permissions to write the content of the repository
- Philomath starter template!

Now, just clone the repository and start writing your own content. Each push to `main` will produce the new version of the book.

Syntax highlighting

Don't forget you can highlight the code inside the book:

```
class Person
  def initialize(first_name, last_name)
    @first_name = first_name
    @last_name = last_name
  end

  def name
    "#{@first_name} #{@last_name}"
  end
end
```

Not only Ruby!

```
def greet(name):
    print(f"Hello, {name}!")

if __name__ == "__main__":
    greet("World")
```

Now it's your turn!

Chapter 2

Use `h1` to mark a chapter title and `h2` to mark sub-section that will be also included in the table of contents with the corresponding page number. Of course you can also use other header levels but they won't be that important in terms of the table of contents. If you need, you can also quote someone:

Some famous words

Author

Good luck!
